

Amendments to the Specification:

Please add the following new paragraph after the paragraph ending on page 5, line 5:

B<sup>1</sup>  
Portable base unit 102 also includes first container mounting ring 120 and second container mounting ring 121. First container mounting ring includes net 122 adapted for receiving and holding clean water bottle 123. Clean water bottle 123 serves as a reservoir of clean water necessary for the provision of dental services. Likewise, second container mounting ring 121 includes net 124 adapted for receiving and holding wastewater bottle 125. Wastewater bottle 125 serves as a storage tank for receiving and holding the waste fluids associated with the provision of dental services. Bottle containers 123 and 125 are adapted to be coupled to conventional dentistry tools which either spray or remove fluid. Preferably, bottles 123 and 125 are coupled via plastic tubing. As will be appreciated, this configuration allows portable dental treatment system 100 to be used in the field and under conditions and circumstances in which municipal water and sewer services are unavailable.
